Coverage Guidance

Coverage Indications, Limitations, and/or Medical Necessity

Molecular diagnostic testing, which includes Deoxyribonucleic Acid- (DNA) or Ribonucleic Acid- (RNA) based analysis (with or without amplification/quantification) provides sensitive, specific and timely (i.e., relative to that of traditional culture-based methods) identification of diverse biological entities, including microorganisms and tumors. This LCD will focus upon techniques in which three basic nucleic acid assay platforms are utilized.

A standardized nucleic acid probe reacts directly with nucleic acids in the test sample. This format is termed a Nucleic Acid Test (NAT). If the test sample contains the organism of interest, the reaction (e.g., hybridization) of these elements will create a detectable endpoint.

In the second case, test sample nucleic acid is detected following amplification. This format is termed a Nucleic Acid Amplification Test (NAAT). The NAAT format increases diagnostic sensitivity by decreasing the lower limit of detection. Several techniques are available to perform such amplification, but one example is the polymerase chain reaction in which logarithmic copies of baseline nucleic acid material can be replicated via cyclical reactions involving "primer" nucleic acid, enzymes and requisite heating/cooling parameters.

Finally, there may be a need for the above process to quantify rather than simply detect the presence of certain microorganisms. Examples include Human Immunodeficiency Virus (HIV), hepatitis C and Cytomegalovirus (CMV) treatment, which can require such quantitative monitoring to determine if therapy is producing the intended reductions in circulating levels of virus.

Furthermore, other techniques (i.e., nucleic acid sequencing) are utilized to assay antiviral resistance signatures for HIV-1 and hepatitis C. Either genotypic or phenotypic analysis can allow therapy to be directed in response to such observed resistance markers.

There are many different organisms whose clinical presentations can be grouped into several categories or clusters. The table below denotes infectious disease manifestations for those organisms where specific CPT codes exist versus organisms which would require non-specific coding. Other organisms, in addition to those listed below, may also require molecular diagnostic testing.

Coding Information

Bill Type Codes:

Contractors may specify Bill Types to help providers identify those Bill Types typically used to report this service. Absence of a Bill Type does not guarantee that the policy does not apply to that Bill Type. Complete absence of all Bill Types indicates that coverage is not influenced by Bill Type and the policy should be assumed to apply equally to all claims.

N/A

Revenue Codes:

Contractors may specify Revenue Codes to help providers identify those Revenue Codes typically used to report this service. In most instances Revenue Codes are purely advisory. Unless specified in the policy, services reported under other Revenue Codes are equally subject to this coverage determination. Complete absence of all Revenue Codes indicates that coverage is not influenced by Revenue Code and the policy should be assumed to apply equally to all Revenue Codes.

ICD-10 Codes that Support Medical Necessity

Group 1 Paragraph: The CPT/HCPCS codes included in this LCD will be subjected to "procedure to diagnosis" editing. The following lists include only those diagnoses for which the identified CPT/HCPCS procedures are covered. If a covered diagnosis is not on the claim, the edit will automatically deny the service as not medically necessary.

Note: Providers should continue to submit ICD-10-CM diagnosis codes without decimals on their claim forms and electronic claims.

List A

Medicare is establishing the following limited coverage for Bartonella henselae and Bartonella quintana (**87471**), Borrelia burgdorferi (**87476**), herpes virus-6 (**87532**), Ehrlichia species (**87798**), herpes virus-7 (**87798**), West Nile virus (**87798**), Leishmania species (**87798**), parvovirus B19 (**87798, 87799**), enterovirus (**87498**), and Babesia species (**87798**):

General Information

Associated Information

Documentation Requirements

Documentation supporting medical necessity should be legible, maintained in the patient's medical record and made available to the AB MAC upon request.

- For a test to be covered, the test must be reasonable and necessary for the diagnosis or management of the patient's condition, must be ordered by a physician, must be reported promptly to the physician, and the physician must use the test result in the management of the patient. For a test to be considered reasonable and necessary, there must be evidence that the test is effective in its intended purpose; a Food and Drug Administration- (FDA) approved test is generally considered effective. When using non-FDA -approved tests, the laboratory should maintain in the patient's medical record the information substantiating the medical necessity of the test and should make that information available to Medicare upon request. In addition, the laboratory may wish to obtain an Advanced Beneficiary Notice (ABN).

Utilization Guidelines

When services billed with codes 87480, 87510 and 87660 are performed using one specimen for a test kit regardless of the number of medically necessary tests, only bill one unit of service using code 87797.

For CPT Code 87500, no more than three units of service may be coded (and reimbursed) for the same date of service. This reflects the fact that no more than three genetic variants (e.g., Van A, Van B and/or Van C) should be necessary for the molecular evaluation of Vancomycin-resistant Enterococcus.
